

Walkaway Stack

Radical, infrastructure-independent
peer-to-peer systems

Andreas Dzialocha
FOSDEM 26, Bruxelles / Brussel

That's "offline"
in Berlin <3

I promise, it made
sense back then!

Let's send a
message!

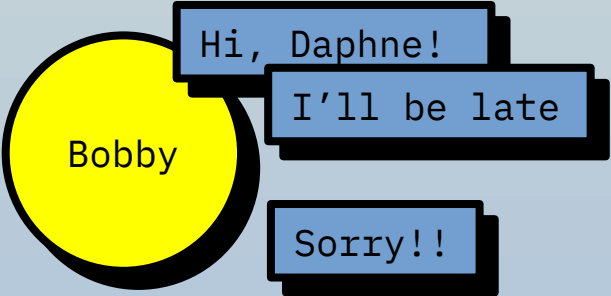

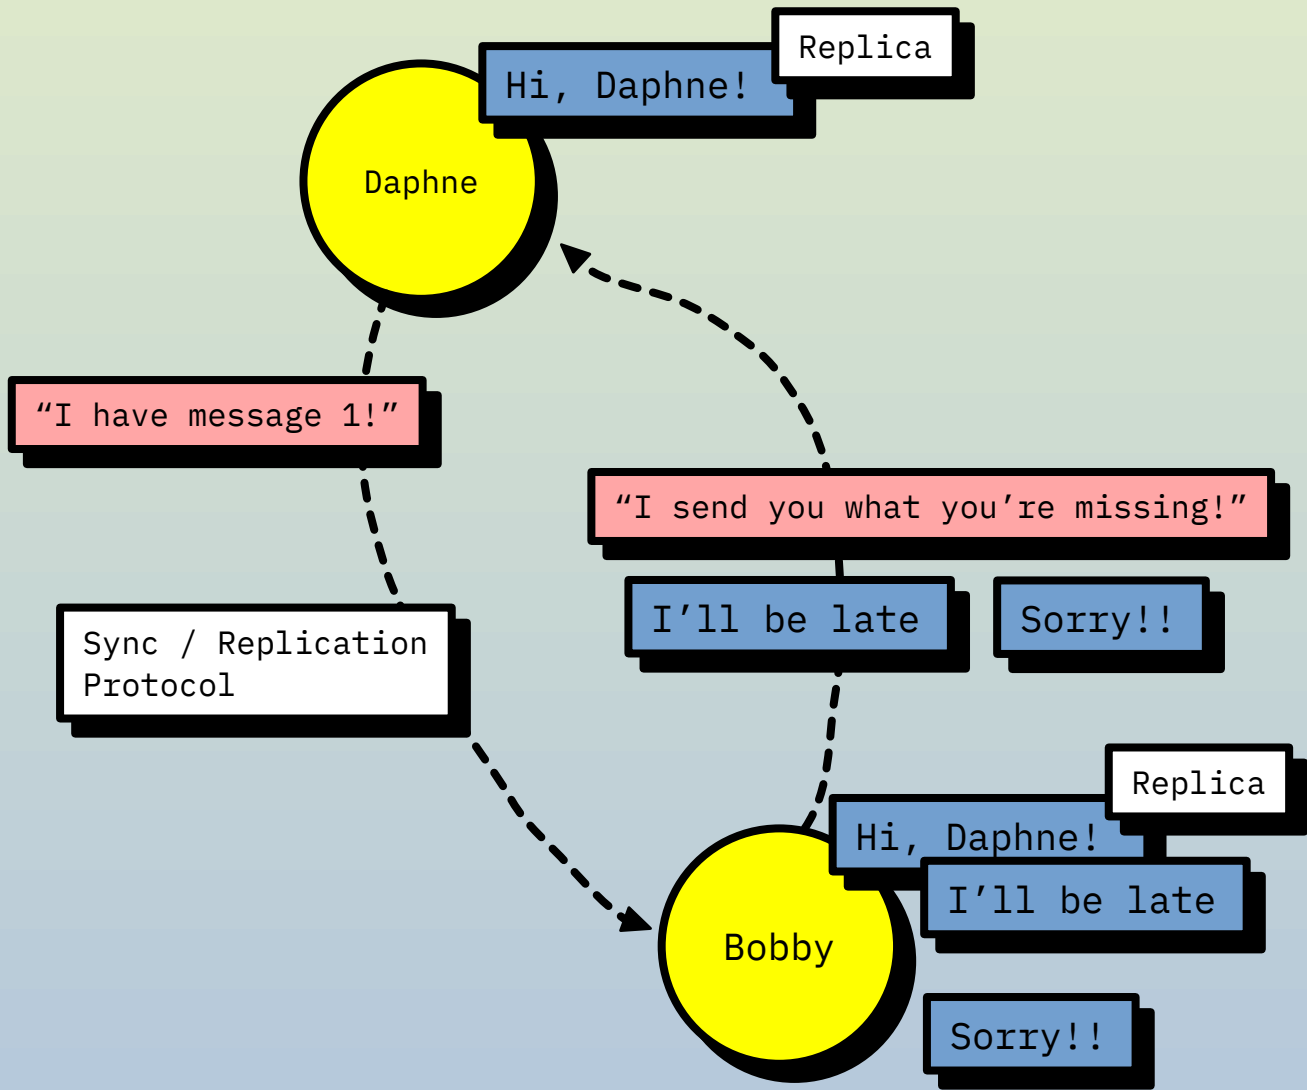

some terminology

Make local-first
friends happy

Make local-first
friends happy

It's a CRDT!

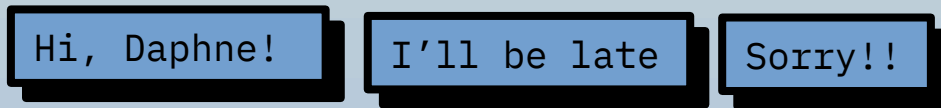

Grow-Only Set

It doesn't matter in which order the data arrives

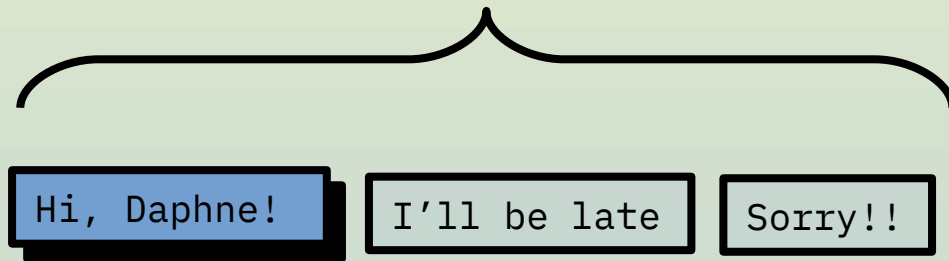

It arrives sometime

It doesn't matter if it arrives multiple times

It's a CRDT!

Grow-Only Set

associative

commutative

It doesn't matter in which order the data arrives

It arrives sometime

eventually consistent

It doesn't matter if it arrives multiple times

idempotent

Small Zoo of CRDTs

Grow-Only Set

Directed Acyclic Graph (DAG)

Last-Write-Wins (LWW) Map

Append-Only Log

Event Processing

Event Delivery

Sync Protocol

Our stack turns
local-first

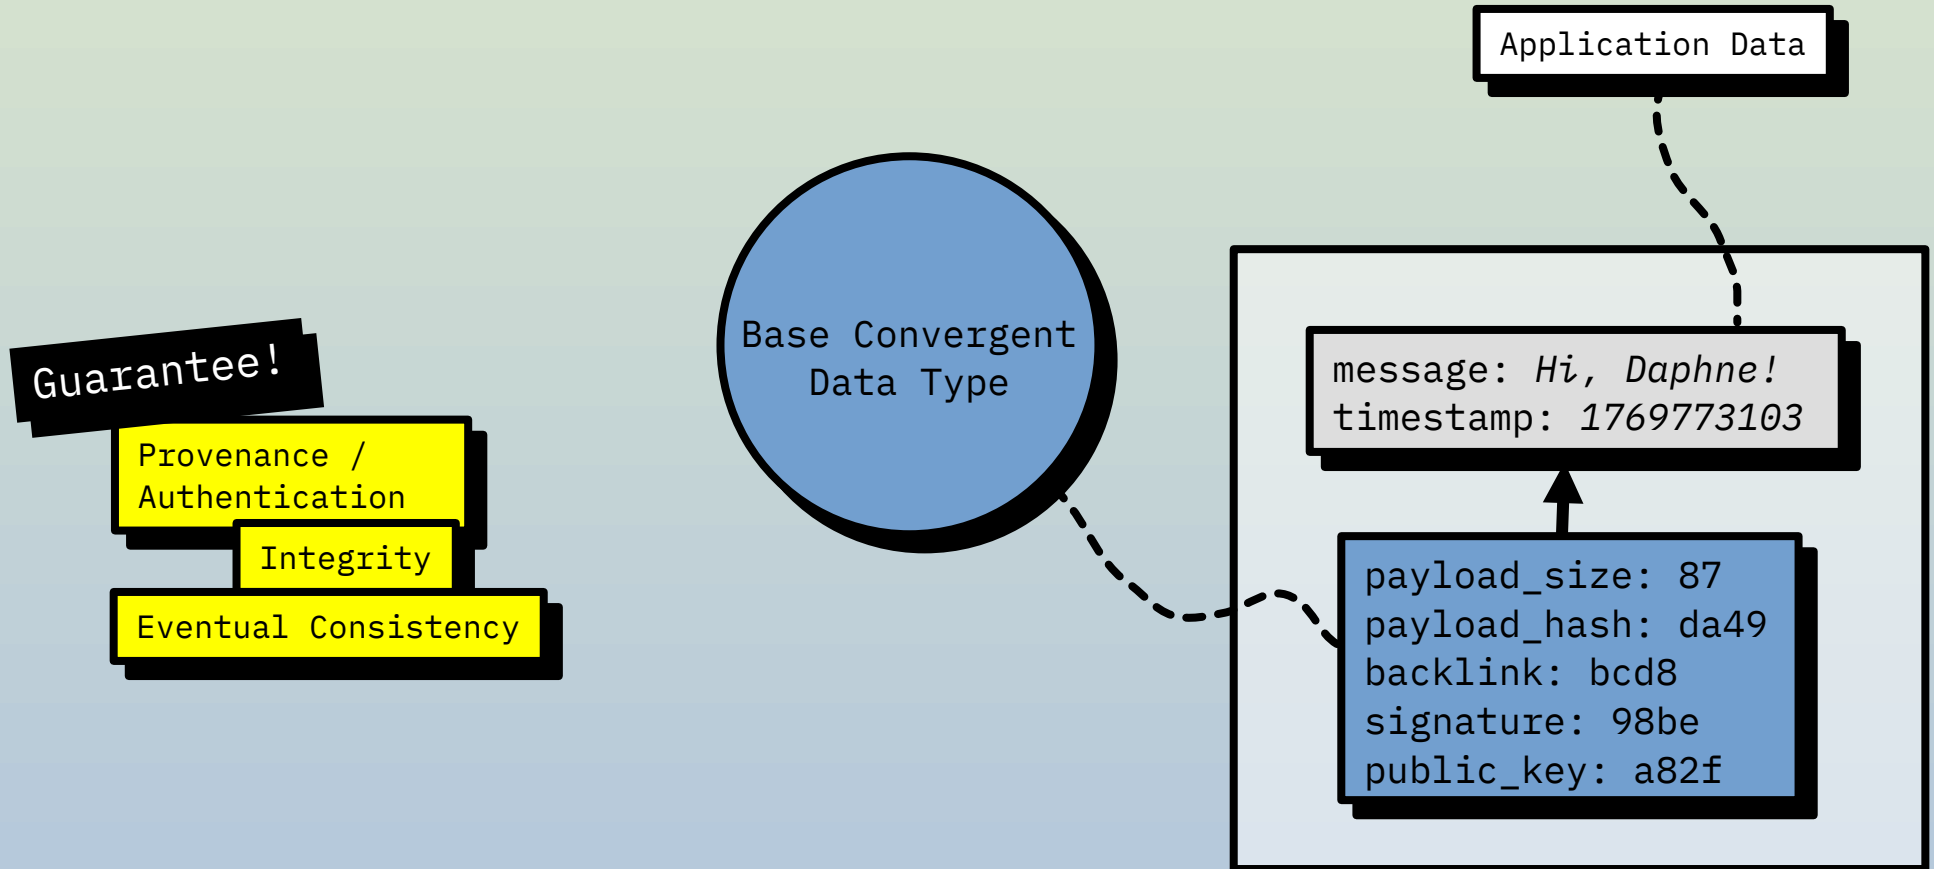

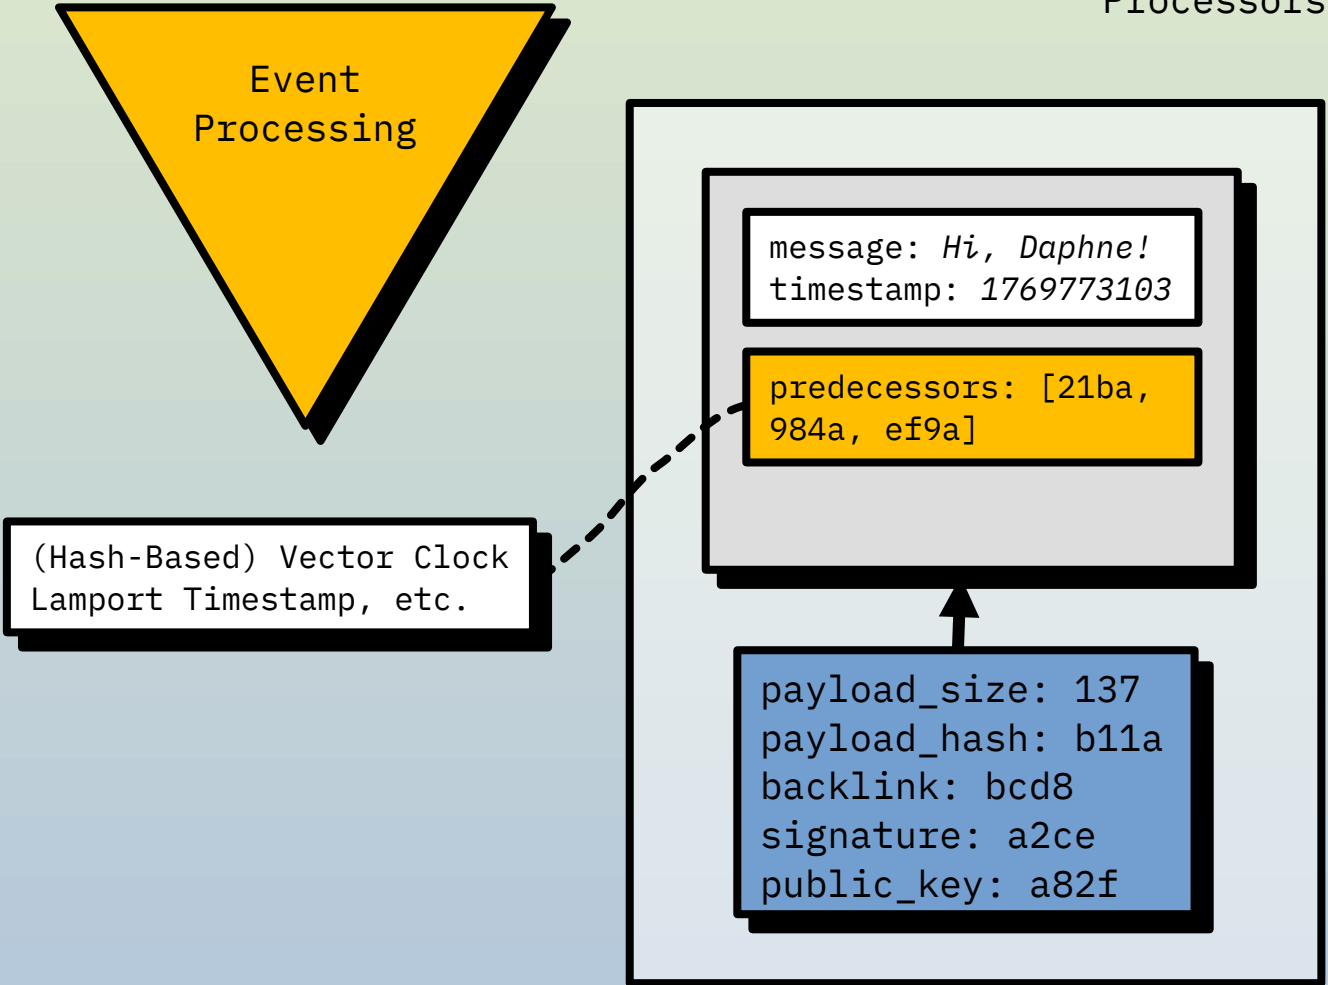

Event Delivery and
Base CDTs

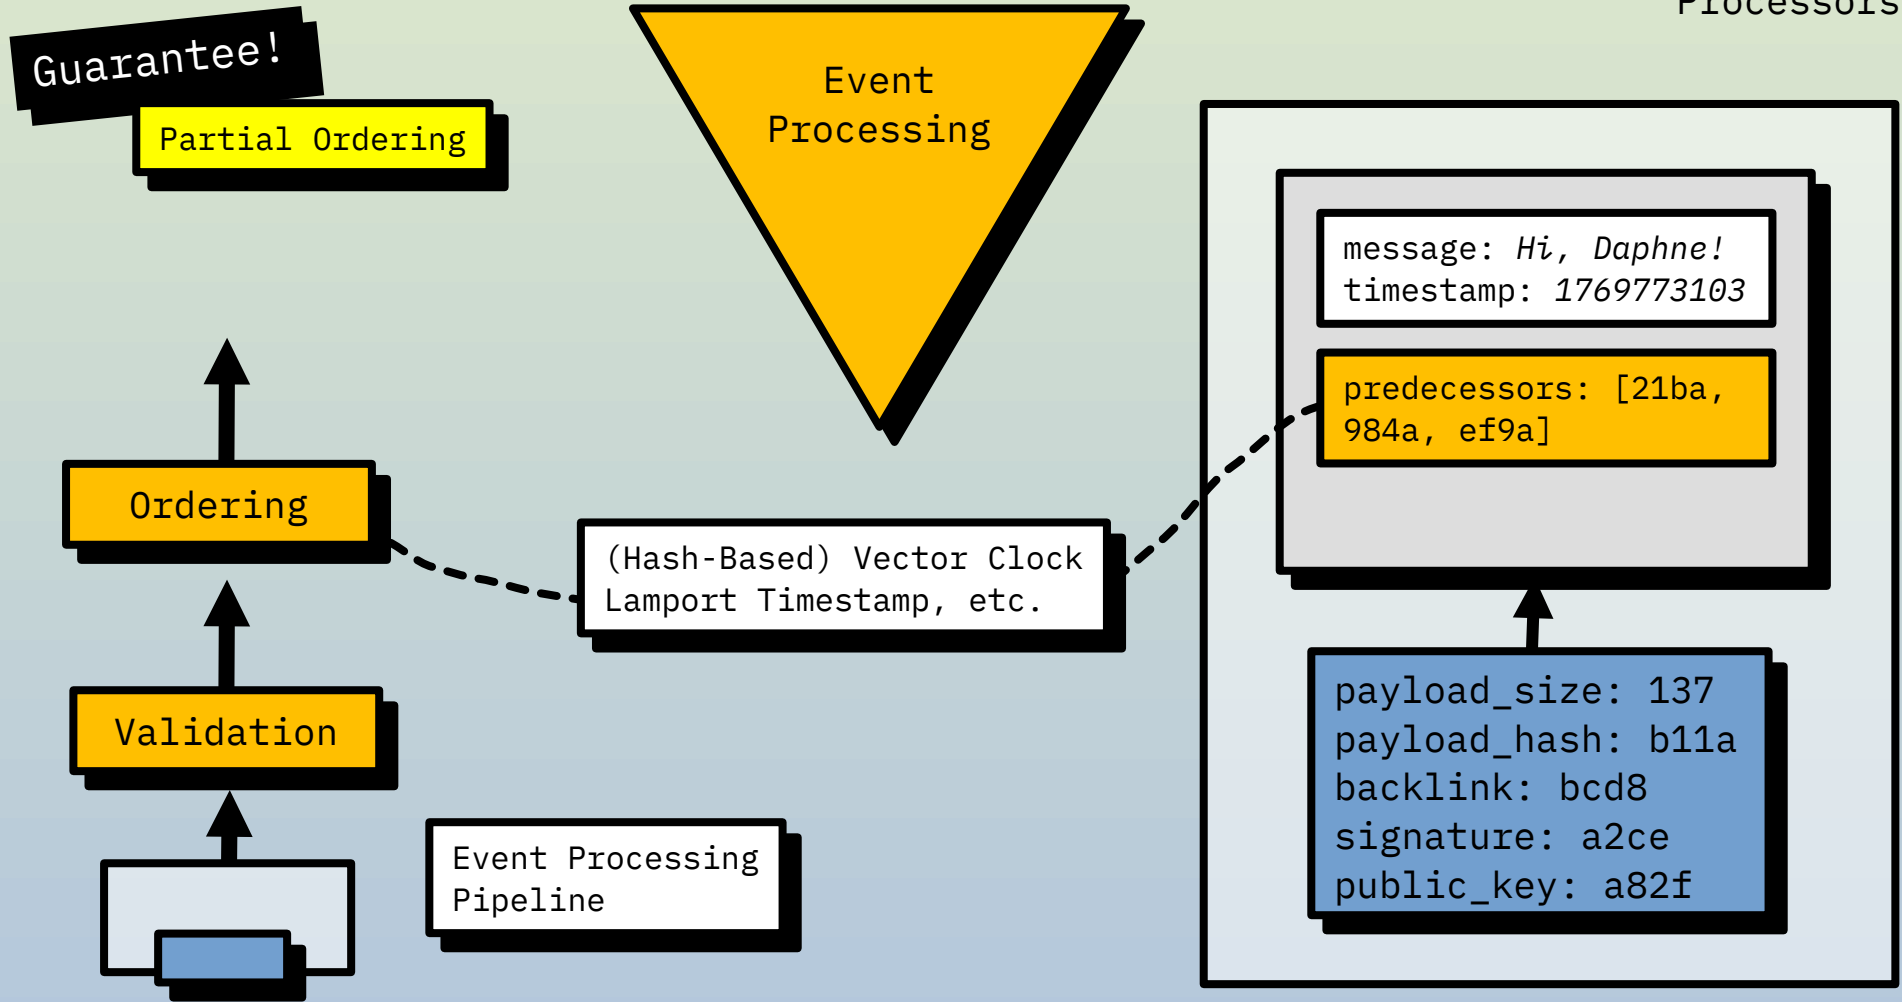

Base CDTs as a
carrier

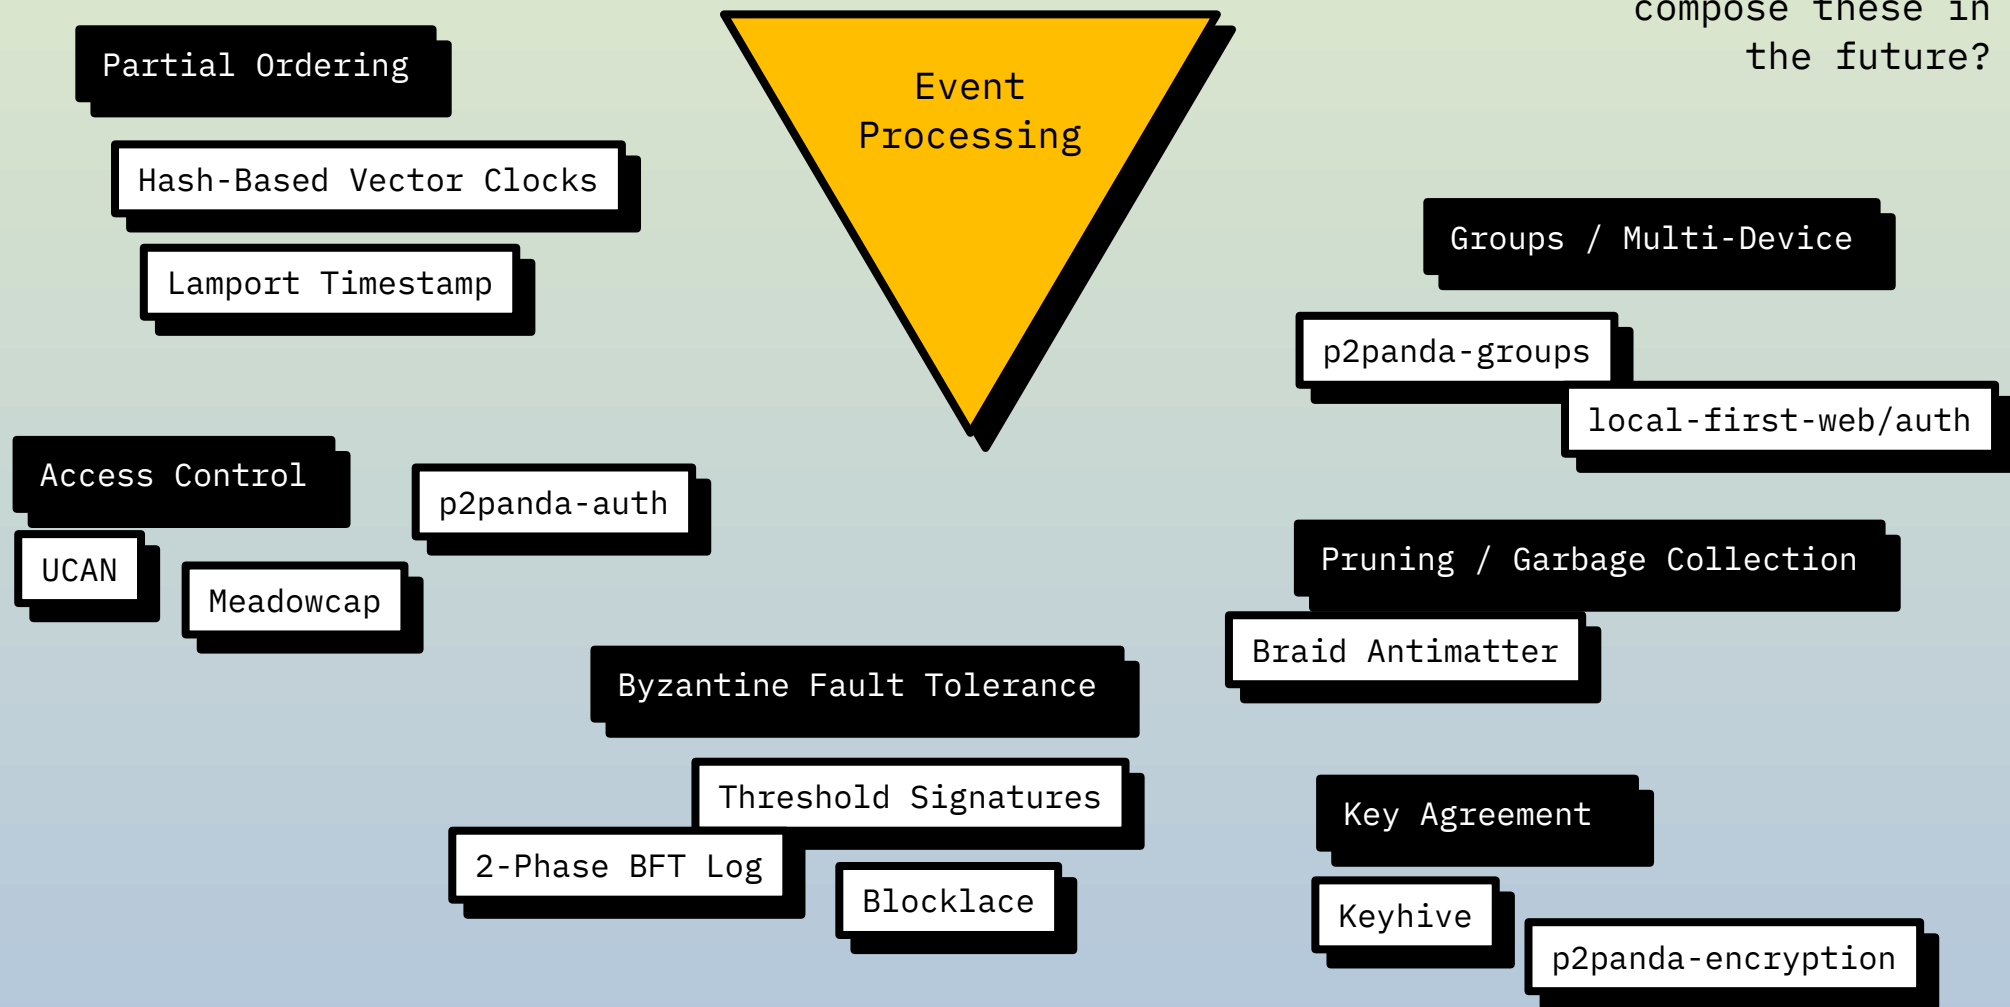

Composing Event
Processors

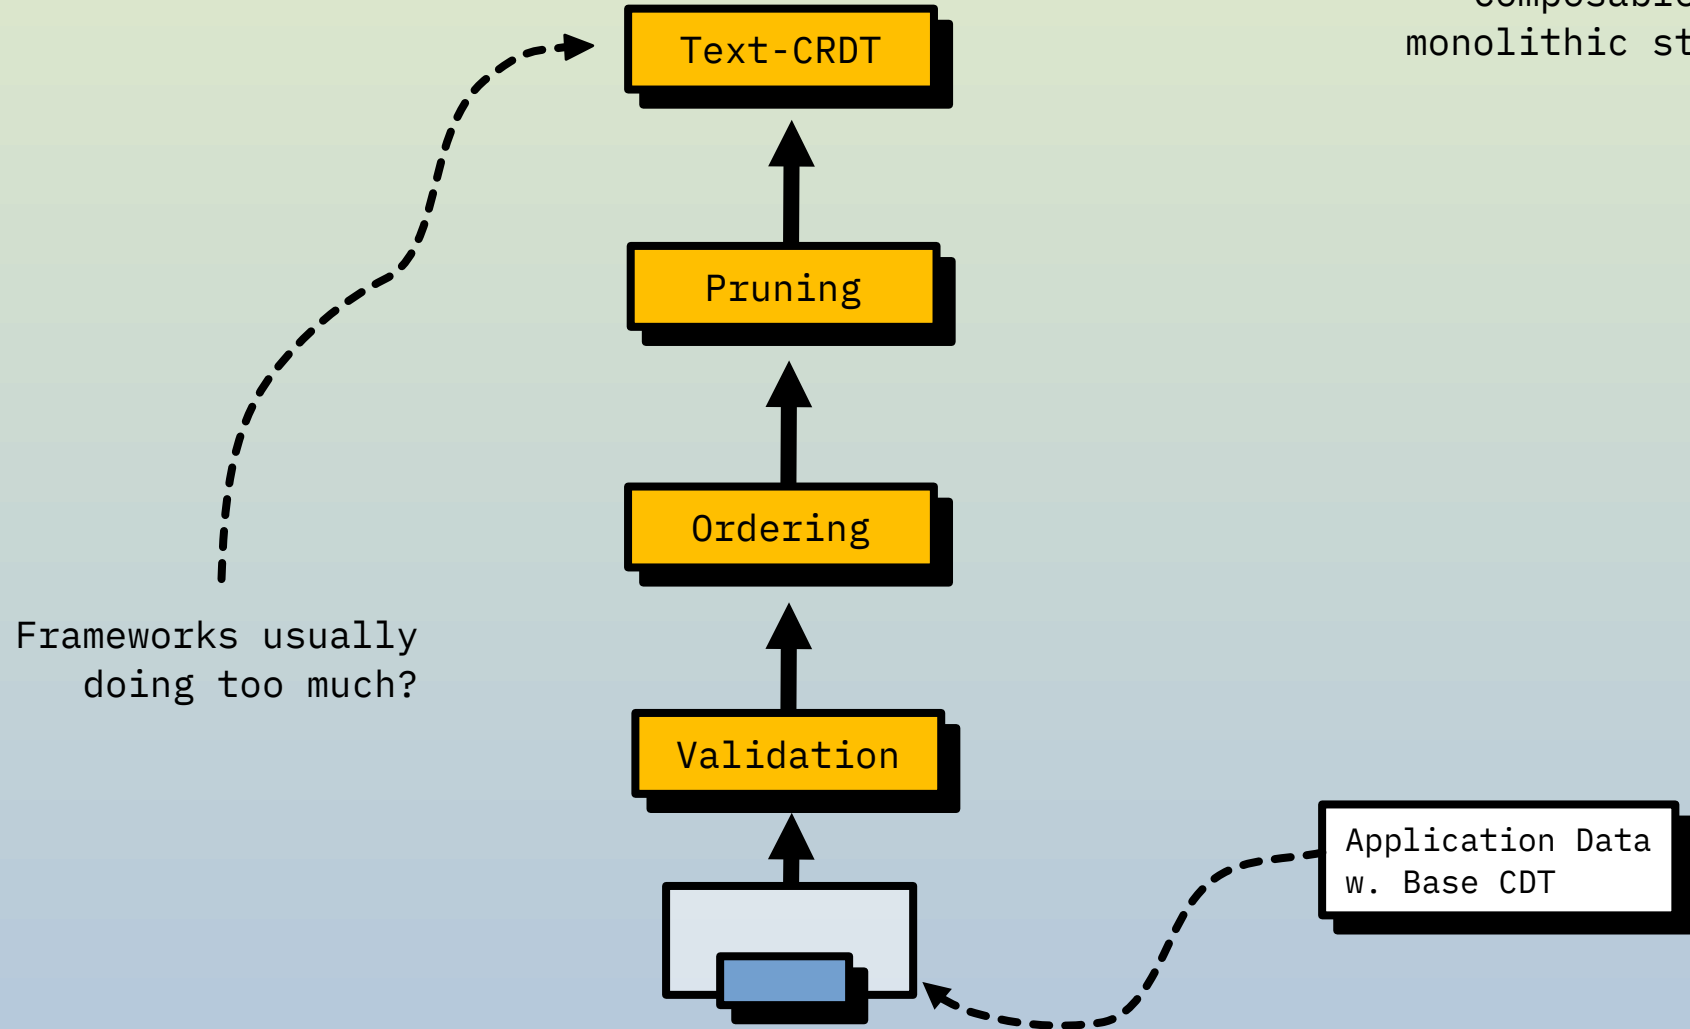

Composing Event
Processors

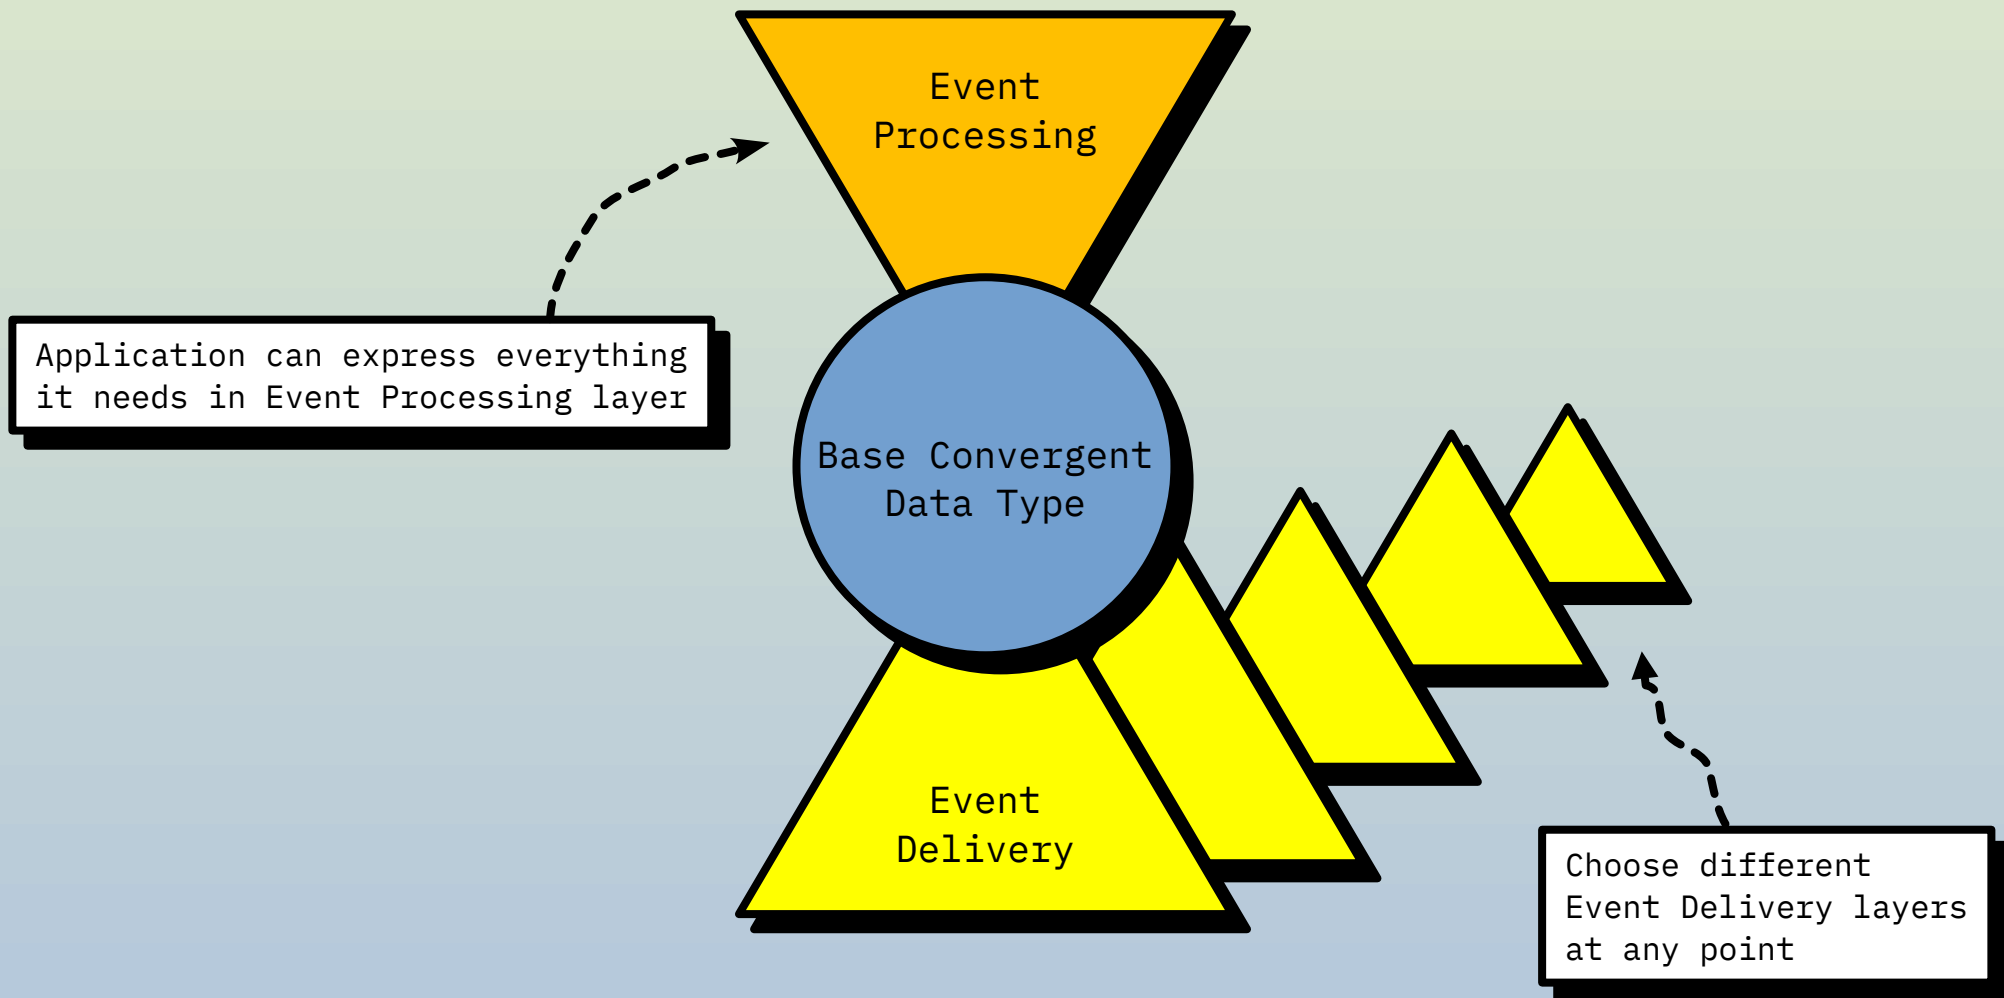

Maybe we can
compose these in
the future?

Composable vs.
monolithic stacks

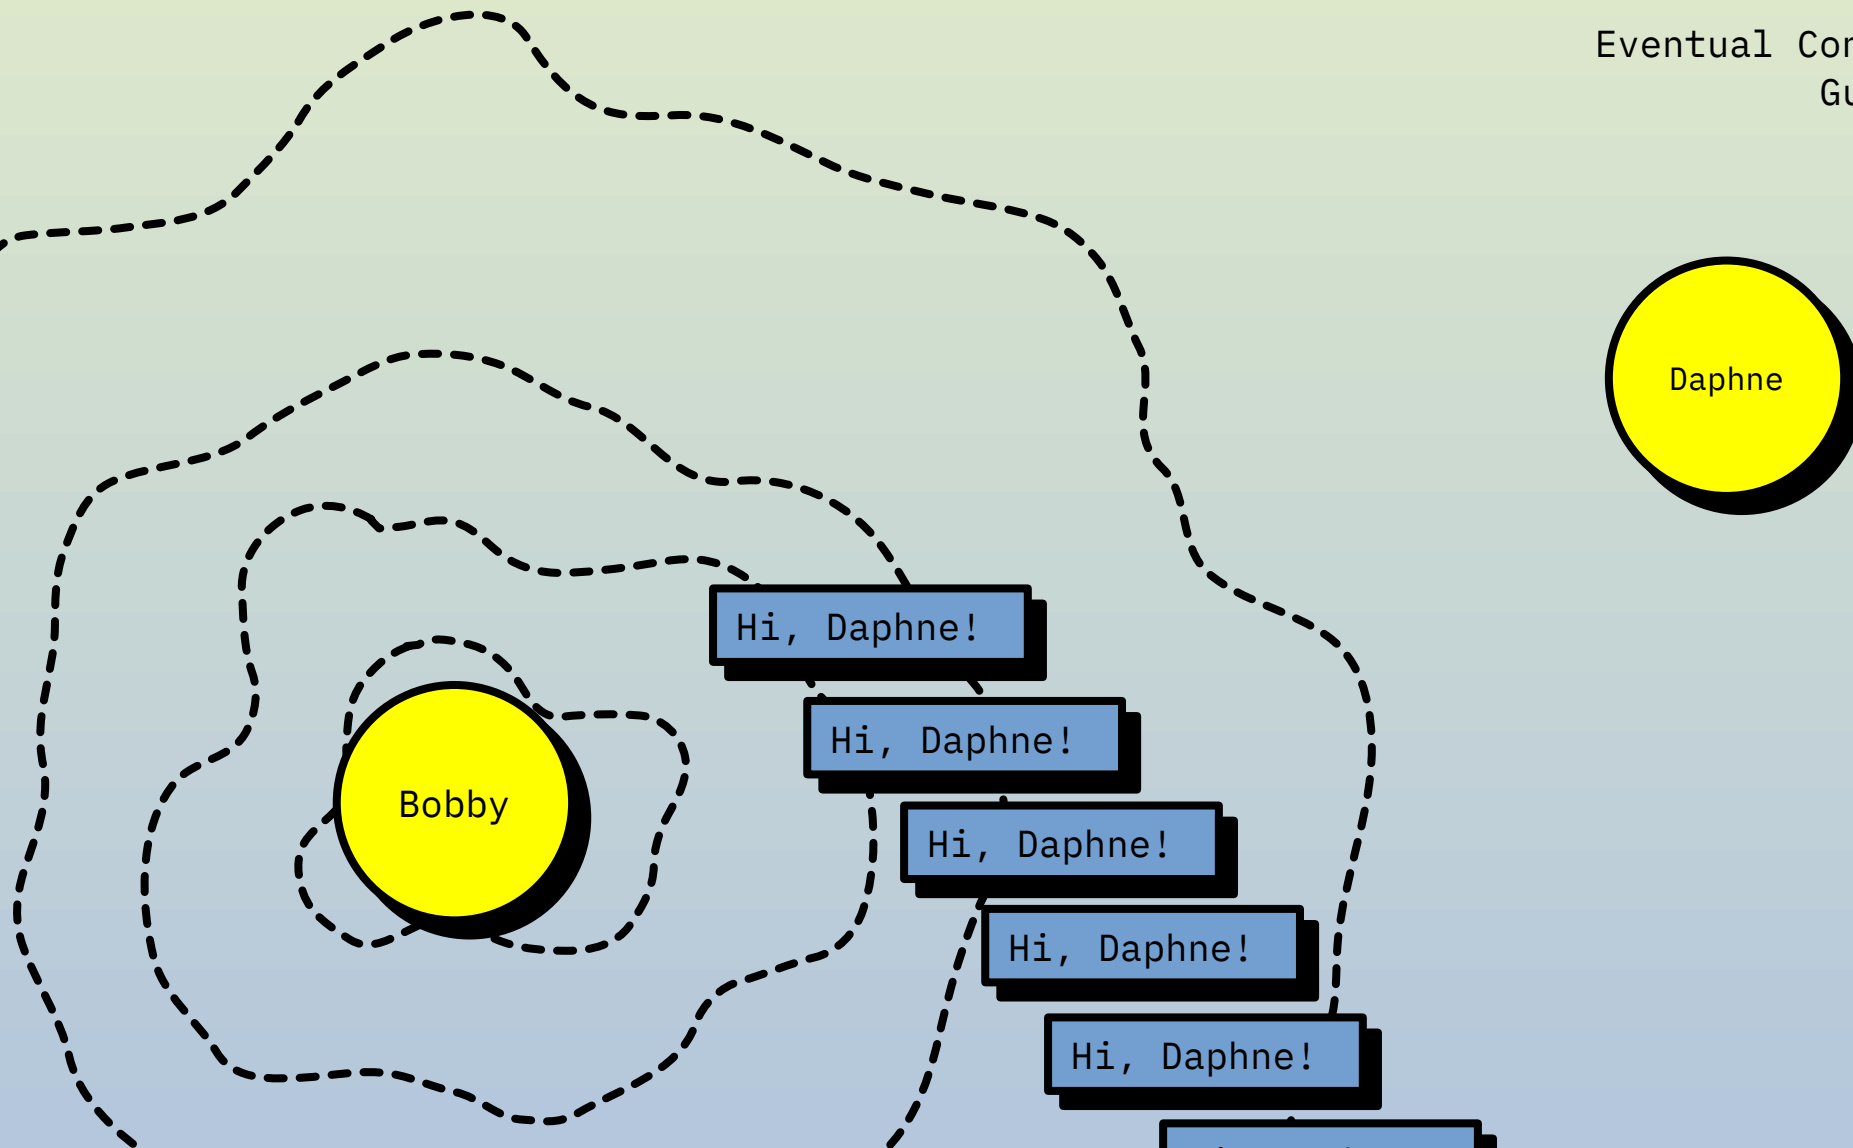

Bobby

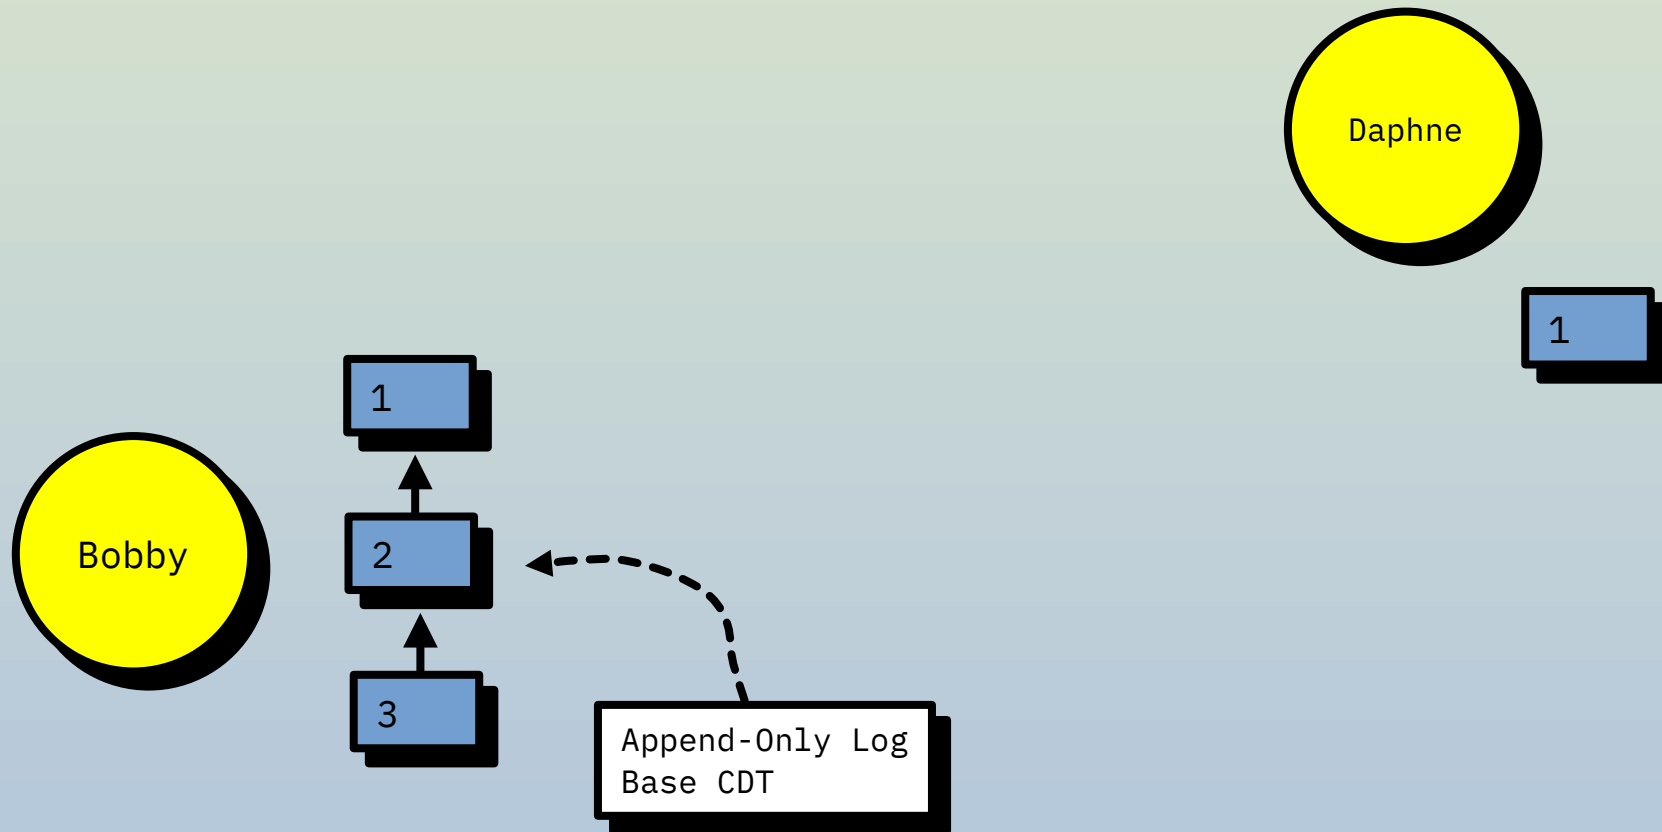

Hi, Daphne!

Daphne

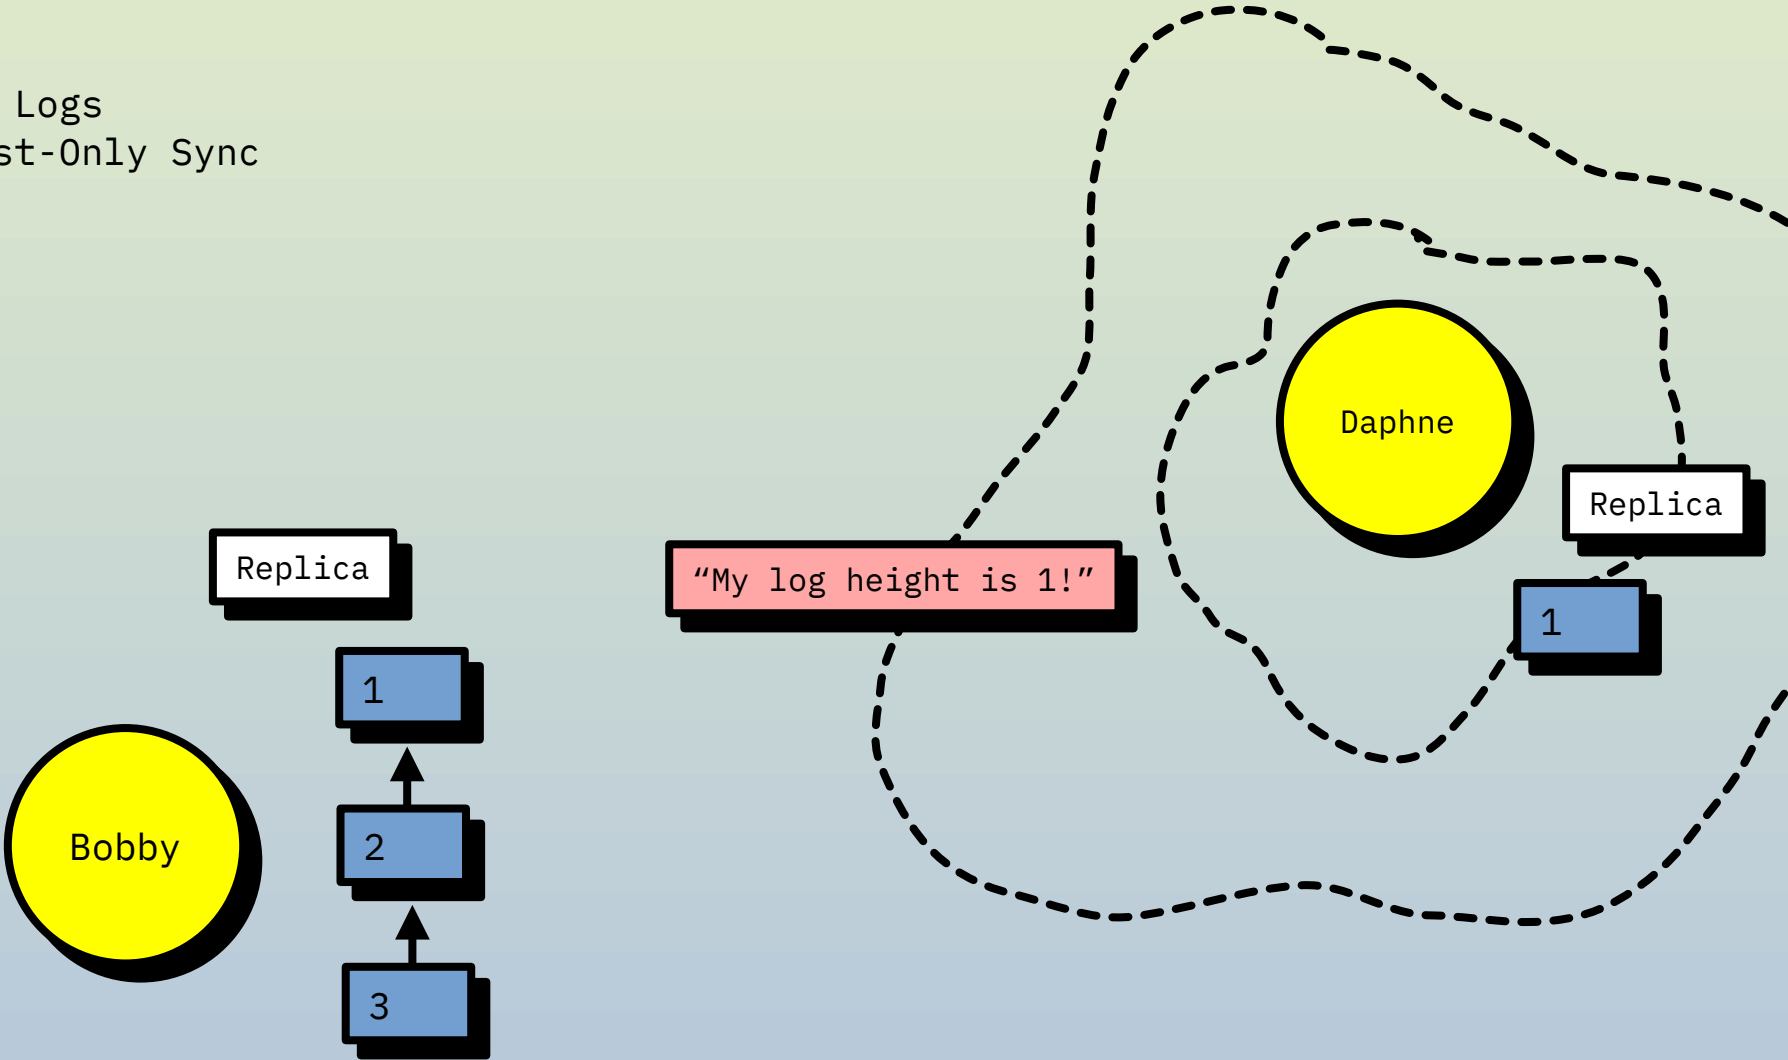

Eventual Consistency
Guarantee?

Local-First Mesh Networking

Append-Only Logs
for Broadcast-Only Sync

Available Bandwidth
can be a problem ..

Data too
large?

tinySSB

Omits "redundant" / deterministic
data to reduce payload size

Experiments with syncing via LoRa, BLE
and packet radio over Atlantic Ocean

payload_size: 137
payload_hash: b11a
backlink: bcd8
signature: a2ce
public_key: a82f

Radio-like Broadcast Overlays

Radio-like Broadcast Overlays

Try to establish a Minimum Spanning Tree
to make sure every message reaches everyone
at least once and avoid flooding

Unreliable Multicast

PlumTree / Epidemic Broadcast Trees

HyParView

It's the same!

.. not really .. but in Walkaway does
the application really need to know?

Eventually Consistent
