

# The Funding of DuckDB

GÁBOR SZÁRNYAS  
DUCKDB LABS

# Databases are hard

## Databases:

- Serve as the source of truth
- Needs to be very robust
- Feature-rich (SQL standard!)

**10+ person-years to develop a production-ready database**

## Fear #8: We are Ignoring the Most Important Problems

- In favor of ones that are easy to solve
  - Driven by the need for quickies
- Examples
  - Data integration
  - Data base design and evolution
  - Tuning a DBMS application is way too difficult
  - Average DBMS takes \$20M to get to production readiness.

— Average DBMS takes \$20M to get to production readiness.

# Developing databases

Lots of upfront investment

Very difficult to do with volunteers

New problem:

*cloud vendors can turn an open-source database into a DBaaS*

# Funding database development

VC money

Ecosystem model

Bootstrapping

# DuckDB

An in-process  
analytical DB

MIT license

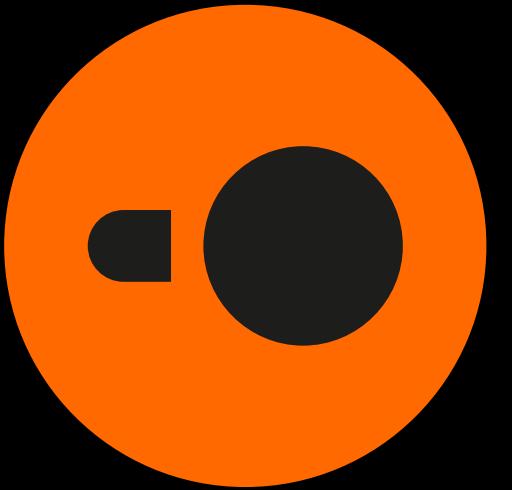

Academic roots at CWI Amsterdam

Every single day on [duckdb.org](https://duckdb.org):

- ~ 1M DuckDB downloads
- > 300 000 unique visitors

Tried the foundation model:  
**doesn't work**

- Founded in 2021
- Services around DuckDB
  - “Red Hat model”
  - Support (SLA, ...)
  - Feature prioritization
- Bonus round: co-founding companies, e.g., MotherDuck
- Going well so far

# DuckDB Labs

Bootstrapped  
company based  
in Amsterdam
